

ANSHUL DEEP BAJPAI

AI & Machine Learning Undergraduate | Aspiring AI Engineer

+91 8810866877 | anshuldeepbajpai@gmail.com | Hasangani, Unnao, Uttar Pradesh

[GitHub](#) | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Motivated Artificial Intelligence and Machine Learning undergraduate with strong foundational knowledge in machine learning algorithms, data analysis, and programming. Skilled in Python, SQL, and data preprocessing with hands-on experience building end-to-end AI/ML projects including classification models, NLP applications, recommendation systems, healthcare risk prediction, and a full-scale fintech analytics platform. Holds certifications from Google, Kaggle, freeCodeCamp, and JPMorgan Chase / Quantum job simulations.

TECHNICAL SKILLS

Programming Languages: Python, C, Java

ML, AI & Data Science: EDA, Supervised & Unsupervised Learning, NLP, Feature Engineering, Model Evaluation, Deep Learning, Generative AI, LLMs, RAG, Prompt Engineering, Transformer Models

Libraries & Tools: NumPy, Pandas, Scikit-learn, Matplotlib, Seaborn, SQL, Power BI, Tableau, Excel, LangChain, Flask, Git & GitHub, Jupyter Notebook

KEY PROJECTS

Bluestock Mutual Fund Analytics Platform | Python, SQL, Power BI, Flask, Pandas, SciPy

<https://github.com/anshuldeepbajpai-dhoni/Bluestock-mutual-fund-analytics>

- Built an end-to-end fintech analytics platform (Bluestock Fintech Data Analyst Capstone) processing 46K+ NAV records and 32.8K investor transactions across 40 mutual fund schemes and 10 fund houses.
- Designed a star-schema SQLite database and ETL pipeline; computed CAGR, Sharpe/Sortino Ratio, Alpha, Beta, Max Drawdown, VaR/CVaR, and delivered a 4-page interactive Power BI dashboard with a risk-based fund recommendation engine.

Spam Email Classification System | Python, Flask, Scikit-learn, NLP, TF-IDF

<https://github.com/anshuldeepbajpai-dhoni/spam-email-filter>

- Developed a Flask-based ML web application that classifies emails/messages as spam or legitimate in real time using NLP and TF-IDF vectorization, with text preprocessing and feature extraction to improve accuracy.

Movie Recommendation System | Python, Flask, Scikit-learn, TMDb Dataset

<https://github.com/anshuldeepbajpai-dhoni/movie-recommendation-system>

- Designed a content-based recommendation engine using the TMDb 5000 dataset with similarity-based scoring, deployed behind a Flask web interface for interactive recommendations.

Sentiment Analysis System | Python, NLP, Scikit-learn

<https://github.com/anshuldeepbajpai-dhoni/Sentiment-Analysis-System>

- Built an NLP-based system to analyze and classify text sentiment using tokenization, text preprocessing, and classification models.

AI-Based Type-1 Diabetes Risk Prediction System | Python, XGBoost, CatBoost, LightGBM, SHAP, Optuna, Streamlit

<https://github.com/anshuldeepbajpai-dhoni/Diabetes-Risk-Prediction-AI>

- Combined unsupervised clustering (K-Means, DBSCAN, Agglomerative, GMM) with PCA/t-SNE/UMAP to generate AI-based patient risk labels, then trained and benchmarked Random Forest, XGBoost, CatBoost, and LightGBM classifiers.
- Tuned the best model with Optuna, explained predictions using SHAP, and deployed an interactive Streamlit app for real-time Type-1 diabetes risk prediction.

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- Google AI Essentials Specialization (5 courses) — Google / Coursera
- Quantitative Research Job Simulation — JPMorgan Chase & Co. (Forage)
- Data Analytics Job Simulation — Quantum (Forage)
- Machine Learning with Python — freeCodeCamp (300 hrs, Developer Certification)
- Data Analysis with Python — freeCodeCamp (300 hrs, Developer Certification)
- Intermediate Machine Learning & Advanced SQL — Kaggle

EDUCATION

Bachelor of Technology (B.Tech) — Artificial Intelligence & Machine Learning

A.P.J. Abdul Kalam Technical University, Lucknow | July 2023 – June 2027

Languages: English, Hindi
